

How do I begin?

Let's start with one question, *some food for thoughts*:

- How do I leverage and rely on technology to improve my operation?

- Is my company ready for digital transformation, or not?

• Should I deploy an off-the-shelf ERP system for my business? Trade off?

• How do I outsource non-core competencies with technology?

• Did I miss out on the blockchain wave? Why does Bitcoin have no future?

• What is the right person with data strategy CTO, CIO or CDO?

- have a budget of X , how do I invest more in technology?
